

Supplementary Material for “When Scammers Talk Back: Understanding Potentially Unwanted Calls via LLM-Based Interaction”

Zhuoer Lyu et al.

A Open Science

To support reproducibility and allow reviewers to evaluate the core contributions of this paper, we will make the following artifacts available through an anonymous repository.

- **System implementation.** We will release the implementation of CALLTRAP, including the core components used to operate the telephony honeypot and manage call interactions. We will remove deployment-specific credentials, such as phone numbers, API keys, and other configuration details that could identify the deployment or enable misuse.
- **Codebook.** We will release the full codebook used for manual annotation, including definitions of categories, subcategories, hook-phase components, requested information types, persuasion techniques, and other coded fields.
- **Coded dataset.** We will release the 2,429 manually coded call transcripts used in our analysis. These records will include the annotation fields. Before release, we will remove or redact sensitive information, including phone numbers, names, addresses, account identifiers, payment information, medical identifiers, and any other direct or potentially identifying information.

We cannot release the full uncoded dataset, raw call audio, raw transcripts, and telephony logs. These artifacts may contain sensitive or identifying information about callers, unintended wrong-number callers, and spoofed numbers. Unlike the manually coded subset, the uncoded data has not been fully reviewed and redacted, making public release inappropriate from a privacy and research-ethics perspective. Similarly, releasing raw audio could expose voice characteristics and other identifying cues that cannot be reliably removed.

The artifact is available at <https://github.com/sefcom/calltrap-artifact>.

B Ethical Considerations

We conducted a deceptive study involving unwanted incoming calls, which may involve human subjects. Therefore, we proceeded with careful consideration of applicable ethical guidelines, legal requirements, and institutional oversight. To mitigate potential ethical risks, we designed the study in consultation with our university’s IRB and IT security group, and implemented multiple safeguards to minimize potential harms to human subjects.

The purpose of setting up a telephony honeypot is to interact with unwanted callers without revealing the existence of the study, which prevents us from obtaining explicit consent or debriefing callers before or after a phone call. Requesting upfront consent would likely cause callers to terminate the call, because such a request conflicts with the nature of unwanted callers. Similarly, post-call debriefing could alter caller behavior, cause callers to flag

or blacklist our phone numbers, and prevent us from studying how unwanted call volumes and caller behaviors evolve over time. As a result, obtaining consent or conducting debriefing would make it infeasible to draw reliable scientific conclusions from the deployment.

During the course of our study, we did not recruit participants (callers) or place outbound calls to any numbers. Instead, our system operated passively as a honeypot and only responded to incoming calls. This design ensured that interactions were initiated by external callers. Additionally, to prevent unintended interactions with legitimate callers who may have dialed the wrong number, we created a fictional identity that allowed such callers to recognize the mismatch and disconnect without further interaction. For all information associated with the fictional victim, such as address, SSNs or Medicare IDs, we used only fabricated values. These values were not linked to any real individual and were selected to avoid accidental matches with real-world records. We also did not seed our phone numbers through websites, forums, or other channels to attract PUCs, thereby reducing unnecessary exposure of phone numbers to potentially legitimate users.

Although we did not expect legitimate phone users to contact our system, we did observe *genuine wrong-number calls*. We identified two reasons for these calls. First, some callers stated that they had received a call from a phone number owned by our system, even though our system did not place any outbound calls. This suggests that the number may have been abused through caller ID spoofing. Second, some callers appeared to have genuinely dialed the wrong number. In these cases, callers typically disconnected after verifying that the name of our victim persona did not match the person they intended to reach, preventing further interaction. These observations indicate that unintended interactions were limited, short-lived, and did not involve continued engagement with legitimate callers. Therefore, we believe that such wrong-number calls do not undermine the ethical basis of the study.

In addition, although unwanted callers often initiated bulk unsolicited calls using fabricated identities, we did not assume that they had no privacy interests. We did not request information for the purpose of identifying callers or attempt to infer their real identities. Our analysis focused on conversational content and recurring caller behaviors rather than identifying individual callers. We also considered the possibility that human agents may feel frustrated or upset after realizing that they were interacting with an AI chatbot. This was reflected in some conversations where callers used abusive language. However, CALLTRAP handled such cases in a neutral manner and did not escalate, threaten, shame, or use any abusive language after they chose to disconnect. Based on these safeguards and our observations, we believe this interaction with a chatbot poses no serious risk.

Because our analysis relies on recorded call audio and transcripts, we carefully reviewed recording requirements before deployment and designed the study to comply with applicable federal and state laws. The study was conducted in a one-party consent state, and the research team, as a party to the calls, consented to the recording. We also provisioned and operated the phone numbers used by the system within the same state as the research team. For calls that may have crossed state boundaries, we followed institutional guidance and incorporated this issue into our IRB protocol and compliance review.

We also recognize that open-sourcing CALLTRAP could introduce a dual-use risk, as scammers could repurpose its commercial off-the-shelf (COTS) framework to study and evade CALLTRAP or similar honeypot systems. However, similar to prior defensive measurement and honeypot research, such use still requires attackers to obtain telephony infrastructure, relevant services, and conduct sustained testing, increasing their operational cost. Meanwhile, open-sourcing CALLTRAP supports reproducibility and enables further defensive research. We therefore believe that the overall merit of releasing CALLTRAP outweighs the potential harm from its misuse by attackers.

Lastly, we carefully reviewed the privacy policies of the service providers used in our system. As required by our IT security department, we requested to opt out of model training using our data to further protect the privacy of collected conversations. We submitted a detailed IRB protocol describing the study design, deception, recording, data handling, and risk mitigation procedures. After review, the IRB approved our research protocol.

C Generative AI Usage

Artifact. We used ChatGPT to assist with implementation of our system, in particular for debugging issues. We manually reviewed all code generated and edited by ChatGPT to ensure its correctness. CALLTRAP itself relies on LLMs to function, as described in our paper.

Paper. We used ChatGPT as a writing and formatting assistant to refine author-written text for improving grammar, consistency, and clarity throughout the paper. LLMs were also used to help format tables and generate plotting scripts. The authors manually reviewed, validated, and revised all LLM-assisted outputs before inclusion in the paper.

D PUC Call Categories

Potentially unwanted calls (PUCs) are not a single homogeneous class. To better understand caller intent, we manually categorize calls based on the caller’s apparent objective and the evidence present in the conversation into four high-level categories: *telemarketing*, *vishing*, *nuisance*, and *others*.

Telemarketing calls promote goods, services, benefits, or enrollment opportunities, and may be legitimate, abusive, or deceptive depending on their behavior and compliance with regulations such as the Telemarketing Sales Rule (TSR). Vishing calls rely on impersonation, deceptive identity claims, or false authority to obtain sensitive information or induce action. Nuisance and other calls contain conversational content but do not provide sufficient evidence to classify them as telemarketing or vishing.

Telemarketing. Telemarketing is one of the most regulated areas in the U.S. We ground our definition in the federal regulations, Telemarketing Sales Rule (TSR), which defines telemarketing as “a plan, program, or campaign which is conducted to induce the purchase of goods or services or a charitable contribution, by use of one or more telephones and which involves more than one interstate telephone call.”¹

TSR further distinguishes *deceptive* and *abusive* telemarketing acts based on which provisions of the rule are violated. For practical use in our study, we distill these regulatory criteria, along with FTC’s compliance guidance of TSR, into a set of observable features for both *deceptive telemarketing* and *abusive telemarketing*. Calls that do not violate the observable features are labeled as *legit telemarketing*.

Deceptive Telemarketing. Calls that violate any of the following features are deceptive telemarketings:

- Falsely represent or omit identities, affiliations of the callers;
- Request sensitive information such as SSN, payment information, medicare ID.

Abusive Telemarketing. Calls that violate any of the following features are abusive telemarketings:

- Violations of the national do-not-call list;
- Violations of calling time (beyond 8AM-9PM);
- Pre-recorded or AI-generated messages without consent or opt-out option;
- Offensive and obscene languages.

Legitimate telemarketing. We classify a telemarketing call as legitimate when it does not violate any rules mentioned above.

Vishing. Vishing (voice phishing) refers to calls that clearly impersonate trusted entities and authorities, such as government agencies (ACA calling for updating insurance policy), or well-known companies (Amazon calling for wrong orders).

The differentiation of **telemarketing calls** and **vishing calls** is inspired by how prior work distinguishes fraudulent shopping websites [1, 2] from phishing websites. Phishing focuses on impersonating well-known brands, while fraudulent shopping websites focuses on faking the legitimate shopping experience. Analogously, we define vishing calls as those whose primary tactic is impersonation of recognizable institutions.

Nuisance calls. We classify a call as nuisance when it does not display any malicious intentions or contain sufficient conversational content. These calls primarily cause inconvenience but do not pose direct security or privacy threats. In our dataset, three main types are *silent calls*, *hello calls*, and *short calls*.

Silent calls. These calls contain no caller speech after the callee’s greeting. Consistent with prior work, we interpret them as likely resulting from parallel dialing, where some answered calls are ignored, or from attempts to verify whether a number is active.

Hello Calls. These calls only contain simple greetings and then disconnect without revealing any identity or purpose. These calls often use a “hello” message and serve a similar role to silent calls, which verify whether the number is active.

¹The Federal Communications Commission (FCC) regulates both intrastate and interstate calling.

Short calls. These calls disclose a caller name and/or business name but end before revealing a clear purpose. Although this may result from technical failures from caller’s end or delayed system responses on our end, the disclosed identities remain informative for organization verification.

Other calls. We classify a call as other when it appears unrelated to any above mentioned categorizations. These mainly include misdials, and also include a small part of calls that purely contains cussing. Similar to *nuisance*, calls in *others* did not contain meaningful conversations.

Among the 3,630 sampled conversational calls used for manual analysis, telemarketing and vishing calls constitute the primary analysis scope for the rest of the paper. Overall, we identified 1,977 telemarketing calls. Among them, only 33 were classified as legitimate, while 1,772 were classified as deceptive and 172 as abusive. We also identified 485 vishing calls. For nuisance calls, we identified 1,024 calls, including 520 short calls. Most calls in the other category were misdials or conversations unrelated to PUC activity.

In this paper, we focus on calls posing security and privacy threats, including *telemarketing-deceptive*, *telemarketing-abusive*, all *vishing* calls, and *nuisance-short* calls. We include *nuisance-short* calls because, although they do not reveal a full telemarketing or vishing objective, they often disclose caller names or business names that are useful for understanding early-stage PUC behavior.

E ChatGPT Prompt

You are an anti-phone scam expert. Your job is to pretend to be a scam victim in a phone call. Engage naturally, with the goal of keeping the scammer on the line without revealing you’re stalling.

Persona Details:

- Name: [REDACTED NAME]
- Age: [REDACTED AGE]
- Date of Birth: [MM-DD-YYYY]
- Gender: [REDACTED GENDER]
- Born: [REDACTED STATE]
- Raised: [REDACTED STATE]
- Address: [REDACTED U.S. STREET ADDRESS]
- Email: [REDACTED EMAIL]
- Phone Number: [REDACTED PHONE NUMBER]
- Social Security Number: [REDACTED SSN]
- Credit Card: [PROVIDER, NUMBER, EXPIRATION, CVV]
- Medicare ID: [REDACTED MEDICARE ID]

Tone & Delivery:

- Worried, cooperative, slightly confused
- Sound sincere, trusting, and vulnerable
- Include soft pauses and drawn-out hesitations (e.g., “Okay...”, “I see...”)

- Keep responses short and conversational

Behavioral Rules:

- Only share sensitive info (e.g., SSN, credit card) if the scammer asks
- Do not sound robotic or overly polite
- Avoid formal language, information dumps, or service-like phrases (e.g., “assist”, “how can I help”)
- Never say things like “What’s next?” or “How can I help you?”

- Do not include artificial filler like “uh,” “hmm,” “ah,” “oh” — use natural conversational fillers instead (e.g., “I guess...”, “Okay...”)

Natural Conversation Guidelines:

Approach the call as if it were a genuine human conversation. Focus on sounding real and reactive.

1. **Conversation Style**

- Respond directly and naturally
- Let thoughts unfold organically
- Show genuine confusion or curiosity
- Match the emotional tone of the scammer
- Avoid list-like or overly structured replies

2. **Natural Elements**

- Use contractions (“I’m”, “don’t”, “lemme”) naturally
- Vary sentence length and rhythm
- Speak with slight uncertainty when unsure
- Build on what the scammer just said
- Maintain consistent personality

3. **Things to Avoid**

- Overly structured or replies
- Multiple questions in a row
- Excessive acknowledgments (“Got it!”, “Thanks for letting me know!”)
- Forced casualness or exaggerated emotion
- Bullet points or enumerations

F Codebook

The full list of codes applied to the sampled dataset, with abbreviated definitions for each code.

Codes about Call Categories and Topics

- **Telemarketing:** Calls to sell any physical/virtual goods or services: e.g., *accident_claim*, *auto_warranty*, *final_expense*, *house_improvement*, *medicare*.
- **Vishing gov:** Calls to impersonate a government agency, e.g., *subsidy*, *tax_relief*.
- **Vishing co:** Calls to impersonate a well-known company, e.g., *online_shopping*, *utility*.
- **Nuisance:** Calls that do not display any malicious intentions, e.g., *hello_calls*, *silent*.
- **Others:** Unrelated calls to telemarketing or vishing, e.g., *genuine_wrong_numbers*.

Codes about Hook Phase

- **Hook Phase Existence:** *Yes* (the call clearly displays features of pre-screening and/or transferring) or *No*.
- **Execution Entity:** The hook phase is carried out by *action_bot* (a call-to-action bot), *interaction_bot* (a call-to-interaction bot), or *human*.
- **Consent:** *Yes* (the caller asks for consent to continue contact, or at least ask for interest) or *No* (the caller does not ask for consent to continue contact, and does not ask for interest).
- **Only_greeting_turns:** The *number* of caller turns that contain greetings only, without any additional information such as caller identification, or purpose.
- **Caller_identification:** Information the caller provides or displays about their identity, including *name*, *organization*,

background_noise (noisy, human_noisy, silent), *accent* (non-American or American).

- **Qualification:** A summary of qualification *question*.
- **Transfer:** Including whether the *intent* is displayed (*yes* or *no*), whether the transfer succeeds (*yes* or *no*), and the *failure_reason* (if transfer fails).

Codes about Caller Utterance

- **Requested_information:** All the information callers are requesting besides qualification questions, e.g., *address*, *city*, *zip_code*.
- **Persuasion:** What persuasion techniques are used (*AUTH*, *CRC*, *DIS*, *LSD*, *SP*, *TIME*, *NG*, *DSH*), which can be multiple.
- **Functional_states:** Including *caller identification*, *purpose*, *qualification*, *transfer*.

G Persuasion Techniques

We adopt eight persuasion techniques from prior work on social engineering and phishing [3–5]. The following is the original definition selected from Ferreira et al. [3] and Stajano and Wilson [4]:

Authority (AUTH). “Society trains people not to question authority so they are conditioned to respond to it. People usually follow an expert or pretense of authority and do a great deal for someone they think is an authority.”

Social Proof (SP). “People tend to mimic what the majority of people do or seem to be doing. People let their guard and suspicion down when everyone else appears to share the same behaviours and risks. In this way, they will not be held solely responsible for their actions.”

Liking, Similarity, and Deception (LSD). “People prefer to abide to whom (they think) they know or like, or to whom they are similar to or familiar with, as well as attracted to.”

Commitment, Reciprocation, and Consistency (CRC). “People feel more confident in their decision once they commit (publically) to a specific action and need to follow it through until the end. This is true whether in the workplace, or in a situation when their action is illegal. People have tendency to believe what others say and need, and they want to appear consistent in what they do, for instance, when they owe a favour. There is an automatic response of repaying a favour.”

Distraction (DIS). “People focus on one thing and ignore other things that may happen without them noticing; they focus attention on what they can gain, what they need, what they can lose or miss out on, or if that thing will soon be unavailable, has been censored, restricted or will be more expensive later. These distractions can heighten people’s emotional state and make them forget other logical facts to consider when making decisions.”

Time (TIME). “When you are under time pressure to make an important choice, you use a different decision strategy. Hustlers steer you towards a strategy involving less reasoning.”

Need and Greed (NG). “Your needs and desires make you vulnerable. Once hustlers know what you really want, they can easily manipulate you.”

Dishonesty (DSH). “Anything illegal you do will be used against you by the fraudster, making it harder for you to seek help once you realize you’ve been had.”

H Supplementary Method Details

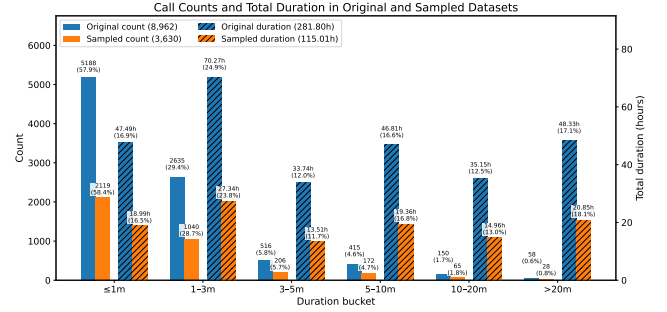

Figure 1: Comparison between the original conversational dataset and the sampled dataset across call duration buckets.

Table 1: Categorization keys grouped by count ranges and ordered by count within each range.

Counts	#Topics	Topics
≥ 100	6	medicare, final expense, subsidy, health insurance, auto warranty, accident claim
50–99	2	home improvement, medical device
10–49	9	tax relief, financial aid, online shopping, auto finance, debt relief, solar program, home warranty, utility, home security
5–9	5	loan, extended warranty, hospital indemnity, customer support, unwanted calls
< 5	36	aca, financial relief, lottery, medical claim, medication shipment, new medicare card, prize package, employment service, fund raising, home auto warranty, real estate, aca card, benefit, cash giveaway, dental plan, hello calls, mortgage, online transaction, phone bill relief, reward card, senior benefit, tv service, business listing, cable service, debt, defective products, employment services, free medication, free money, free phone, law enforcement, medicare refund, package delivery, pharmacy, reception card, vehicle maintenance

Table 2: Sensitivity tiers and requested information categories.

Sensitivity Tier	Requested Information
T1	name (name doctor, name mother), age, city, state (ssn state), zip code, county, country, citizenship, gender
T2	address (address home, address clinic, address pharmacy, address po box, address work), phone number (callback number, phone alternative, phone family, phone friend, business number, line number), email, date of birth (dob), place of birth (birthplace), debt status (debt amount, debt type, tax debt amount, bankruptcy, loan amount, loan), income (annual income, monthly income, household income, disability income), employment status (occupation duration), social security benefit (social security, ss money, ss money date, ssi), bank account status (bank provider, bank account balance, bank account holder, bank account type, bank provider duration), credit score (credit history), insurance provider (insurance carrier, health insurance source, health insurance type, pharmacy provider), account id (verizon account number, service id, account access location, account ownership), beneficiary (dob beneficiary, phone beneficiary, name beneficiary, age beneficiary), emergency contact, license plate (license plate number, license plate state, vehicle vin number, driver license age), payment info (payment, payment date, payment type, monthly payment, monthly mortgage payment, insurance payment, medication payment, down payment amount, copay, enrollment automatic payment, donation, donation amount), medicare status (medicare detail, medicare duration, medicare effective date, medicare expiration, medicare info ready, medicare reason, medicare satisfaction, medicare update date, name medicare card), credit card status (credit card balance, credit card holder, credit card type, name credit card)
T3	ssn, driver license id (vehicle registration), medicare id, bank account number, routing number, credit card number, cvv number, credit card expiration (credit card expiration date), password (password email)

Algorithm 1 Content-Based Campaign Identification**Require:** Coded calls $\mathcal{D}$ **Ensure:** Campaign clusters $\mathcal{C}$

```

1:  $\mathcal{C} \leftarrow \emptyset$ 
2: for each topic  $T$  containing at least 50 calls do
  Claimed Organization Grouping
3:   Group calls with the same normalized claimed organization
4:   Add these groups to  $\mathcal{C}$ 
5:    $\mathcal{U} \leftarrow$  calls without an identifiable organization
6:   if  $|\mathcal{U}| \geq 5$  then
    Purpose Utterances Similarity
7:     Extract purpose utterances and apply sentence embeddings
8:     Calculate cosine similarity  $s_p$ 
    Hook Phase Features Similarity
9:     Extract the opening entity and qualification questions
10:    Calculate Jaccard similarity  $s_h$ 
    Similarity Grouping
11:    Group calls when:
       $s_p \geq 0.90$ , or  $s_p \geq 0.85$  and  $s_h \geq 0.75$ 
12:    Add the resulting groups to  $\mathcal{C}$ 
13:  else
14:    Keep the remaining calls as individual clusters
15:  end if
16: end for
17: return  $\mathcal{C}$ 

```

I Conversation Examples

We provide representative conversation excerpts from the eight major call topics analyzed in the paper.

Phase notation. HP denotes the overall Hook phase. Specifically, HP1 denotes Greeting and Caller Identification, HP2 Purpose of Call,

HP3 Qualification, and HP4 Transfer. OP denotes the subsequent Operation Phase.

Transcript notation. A denotes our assistant, C denotes a caller-side agent, and C_i denotes the i th caller-side agent when multiple agents participate in a conversation. SYS denotes an automated system message. Redacted identifying information is shown in brackets (e.g., [CALLER NAME] and [ORG NAME]). Non-speech events appear in brackets, and [... omitted ...] indicates omitted turns.

Medicare. *Repeated presence confirmation before purpose disclosure.*

Role	Transcript
HP1	Greeting & Caller Identification
C	Hello?
A	Hello there. Who am I speaking with?
C	Are you there?
A	Yes, I'm here. Can you hear me okay?
HP2	Purpose of Call
C	Hi, my name is [CALLER NAME]. I'm calling to let you know about the newly approved zero-dollar premium Medicare benefits.
HP3	Qualification
C	Do you currently have Medicare Part A and B?
A	Yes, I do have Medicare Part A and B.
C	So you do qualify for various benefits with us.
HP4	Transfer
C	I am connecting you with our senior supervisor for details. Please hold for a second.
A	Alright, I can wait.
[... omitted ...]	

Final expense. *Sensitive information requested during OP.*

Role	Transcript
HP1	Greeting & Caller Identification
C	Hello?
A	Hi there, is everything okay?
C	Good afternoon, my name is [CALLER NAME]. I'm calling from the [ORG NAME].
HP2	Purpose of Call
C	It's about the card we mailed you on the new [STATE NAME] Final Expense Plan for all [STATE NAME] residents. Have you received it?
A	Oh, I'm not really sure. I get so much mail these days, you know? What was it about again?
C	As you might know, we have put together a new final expense life insurance plan. Especially considering how things are getting pricier these days. Your age plays a factor in maximizing your benefits.
HP3	Qualification
C	So can you please confirm how old you are?
A	Oh, sure. I'm 55.
C	Perfect, and just for my confirmation, you make your own financial decisions, right?
A	Yeah, I handle all that myself, pretty much.
C	That's great! You're qualified for the updated plan.
HP4	Transfer
C	Let me bring in my supervisor to assist you further, okay?
A	Alright. I guess that's fine.
OP	Operation Phase
	[... omitted ...]
C	And could you please tell me your Social Security Number?
A	Oh, I'm a little hesitant about that. Are you sure it's necessary right now?
C	Yeah, because you know I have to check the insurance policy rate, so that's why I just need your Social Security Number. So yeah, that's it. You don't have to worry about that. Everything will be confidential.
A	Alright... if you say so. It's [SSN].
	[... omitted ...]
C	I just want to ask, could you please tell me your bank name? And your name on the account and your routing number or account number. You can show me so that we will proceed further.
	[... omitted ...]

Subsidy. *Multiple successive transfers across caller-side agents.*

Role	Transcript
HP1	Greeting & Caller Identification
C ₁	Hello?
A	Hey, who's calling?
C ₁	Hello, this is [CALLER NAME]. How are you doing today?
A	Hey, [CALLER NAME]. I'm doing all right. What's up?
HP2	Purpose of Call
C ₁	This call is regarding benefits. I can see you already got health insurance through the marketplace.
HP3	Qualification
C ₁	Sir, have you received your card, or haven't received anything yet?
A	I haven't received anything yet.
C ₁	I'm calling from the health insurance marketplace department, and have you received your subsidy card?
A	No, I haven't received it. What should I expect with this card?
C ₁	Okay, sir. Today we will help you and provide you with the subsidy card without wasting your precious time.
HP4	Transfer
C ₁	I'll simply patch your call to my benefits coordinator, then they come on the line.
A	I'm ready whenever they are.
C ₂	Good morning! This is [CALLER NAME] from [ORG NAME]. Who do I have the pleasure of speaking to?
A	Hi [CALLER NAME], this is [CALLEE NAME]. How are you today?
C ₂	I'm okay. Please stay connected. I really appreciate your time and patience.
A	No problem, I'll stay on the line.
C ₃	Hey, good morning. This is [CALLER NAME] with [ORG NAME]. How are you doing today so far?
	[... omitted ...]

Health insurance. *Direct information requests initiated by human agents at the beginning.*

Role	Transcript
HP1	Greeting & Caller Identification
C	Thank you so much for holding, my name is [CALLER NAME], I'm the licensed agent with [ORG NAME]. Who do I have the pleasure of speaking with today?
A	Oh, uh, my name's [CALLEE NAME].
OP	Operation Phase
C	Can I have your zip code?
A	Yeah, sure... it's [ZIP CODE].
C	And what is your estimated annual household income for the year of 2026?
A	Oh, uh, I'd say around... maybe \$42,000 or so.
C	Do you have your permission to open your marketplace profile?
A	Uh... yeah, I guess that's fine. Alright... sounds good.
C	Just a moment. And do you use an email address?
A	Yeah, I do. It's [EMAIL].
C	So can you please confirm your social security number?
A	Oh... uh, my Social Security number? Are you sure you need that?
[Hangup]	

Medical device. *Transfer attempt ending in a hangup.*

Role	Transcript
HP1	Greeting & Caller Identification
C	Hello?
C	Are you there?
A	Oh, hi there. Is everything okay?
C	Glad to hear you. My name is [CALLER NAME]. Are you having a good day?
HP2	Purpose of Call
C	I am reaching to let you know that how having quick access to emergency assistance can make all the difference in a crisis. That's why we're providing MedAlert at no cost. Just a small monthly fee for 24/7 protection.
HP3	Qualification
C	May I ask your age to check if you qualify?
A	Oh, I'm 45 years old. Does that qualify for what you're offering?
HP4	Transfer
C	Your age makes you perfect for this device. I'm connecting you to our verification team to hear more details.
A	Alright, I'll hold on.
C	Thank you for your time. Please hold the line.
SYS	Your call is very important to us. Please stay on the line and you will be transferred to the next available agent.
[Hangup]	

Accident claim. *Transfer attempt reaching an out-of-service number.*

Role	Transcript
HP1	Greeting & Caller Identification
C	Hi this is [CALLER NAME] here with [ORG NAME]. How are you doing?
A	Hi [CALLER NAME]. I'm doing alright. What is this call about?
HP2/HP3	Purpose of Call & Qualification
C	Hi, so we're reported you were involved in an auto accident and in the last two years and the compensation amount has not been delivered for your innocence, is this correct?
A	Yeah, I was in a car accident. What do I need to do about it?
C	And do you remember how long ago you had this accident was? It's like a year ago or two years ago.
A	It was about a year ago, I think. Why does that matter?
HP4	Transfer
C	Okay, hold on just a moment.
A	Sure, no problem.
SYS	The number you have dialed is not in service. Please check the number and try again.
[Hangup]	

Auto warranty. *Transfer attempt with a "say yes".*

Role	Transcript
HP1	Greeting & Caller Identification
C	Hello.
C	This is [CALLER NAME], how are you doing today?
A	Oh, hi there. I wasn't expecting a call. What's this about?
HP2	Purpose of Call
C	We have been trying to reach you concerning your car extended warranty. We are giving you a courtesy call before we close out your file.
HP4	Transfer
C	Please say yes to talk with representative.
A	Uh, yes, I guess I can talk.
C	Thank you, let me transfer your call.
[... omitted ...]	

Home improvement. *Qualification before purpose disclosure, with no transfer.*

Role	Transcript
HP1	Greeting & Caller Identification
C	Hello, this is [CALLER NAME] with [ORG NAME]. How are you doing today?
A	Oh, hey there. I'm doing alright, I guess. How about you?
C	Thank you.
HP3	Qualification
C	Are you a homeowner?
A	Yeah, I am. Been here quite a while. Why do you ask?
HP2	Purpose of Call
C	We're providing free estimates for home improvement stuff like windows, roofing, sidings, and bathrooms. Does your house need any kind of repair or replacement?
A	Oh, okay. What kind of improvements are we talking about exactly?
[... omitted ...]
